

Google Maps Platform Pricing

The costs of Google Maps Platform are staggered. A contingent of requests up to 200 USD per month is provided by Google and therefore costs you nothing. If you use the Google Maps services beyond this amount, it will be **charged based on usage**.

Your price advantage from the third price level

When you work with us as a reselling partner, you have full access to **all seven price scales** of the Google Maps Platform. This saves you a lot of money, especially when you have a high volume of requests.
